Robot Dolphin Rodeo
CISC 320 First Programming Project

Phase 1 Due Friday, Apr 17, 2015
Final solution Due Friday, Apr 24, 2015

April 14, 2015

This is an update on programming project 1. The due date is postponed by a week, but a partial solution is still due this Friday, April 17.

The partial solution will count as 20% of the project grade. You will get full credit for the partial if you submit code that compiles and runs and does some (possibly small) step toward your solution. Minimally it could be Skiena's strong.c (with supporting files) only slightly modified to print something after running the strong components algorithm.

A total solution with bugs but seems "close" to a solution will **not** get as favorable a score as a small partial that works. It is essential in programming to plan and test and then save partial solutions (solutions to part of the problem as you have decomposed it). Otherwise it is very easy to chase a series of debugging changes down a rabbit hole from which you'll never get out.

For the Phase 1 submission, submit your code including a Readme file that explains where you are and how each file included fits in. In particular it explains which file contains main(). Submit a tar file on Sakai.
