

Homework 3: Images and Links

Due Sunday at midnight

(This homework should be done with a partner).

1. Create a new web page from your template. Include an image. Make sure it validates.
2. Create a table with two rows and two columns. Place an image inside the first data cell in the first row, and add descriptive text to the first data cell in the second row. Repeat for the second data cell in the first row and the second data cell in the second row.
3. Inside your web page create a link to a web page on another server. Make sure that it works.
4. Inside your web page make an image be a link to another web page. Make sure this works.
5. Create 3 more web pages from your template (each one barely has to have any content in it). Move one to a folder that you have created in the folder that holds your main web page. Move one to the folder above the one that holds your main web page. Now make all of these web pages link to each other. (While we will go over this in class, there are step-by-step instructions in the tutorial.)
6. Create a link from the bottom of your main web page to the top of your main web page.
7. Create a link from one of the other web pages to the bottom of your main web page.
8. Create a paragraph with line breaks in it. Include the strong tag around a word or text you want emphasized.
