

Homework 3

(Due Sunday at midnight)

Create a folder called HWK3. Inside of the HWK3 folder, place the following:

Part 1:

1. Using your template, create a brand new web page inside of HWK3. Create a form with a text box (this is different from a textarea).
2. Add a submit button
3. Add a radio button
4. Add a checkbox
5. Add a select box
6. Add a textarea
7. You're done with forms. Now add some comments to your web page basically saying that you just created a form here. (We're just practicing comments and forms here)
8. Make sure everything validates.

Make sure everything validates!

Part 2:

Using one of the html files you created for another homework, the website you're working on, or create a new web page, add the following style elements in an attached stylesheet. NOTE: both the web page you are working on and the attached style sheet should be inside the HWK3 folder.

1. Include a border-style, border-width, and border-color.
2. Include a margin
3. Include padding that is different on one side from the padding on the other sides.
4. Set the width of an element (to something that isn't too wide)
5. Use margin: auto to center an element you're styling.
6. Add a background color to an element (using a hex value to represent the color)
7. Add a background image to a different element than one you added the background color to that tiles continuously.
8. Add a background image to another element that repeats horizontally only. Position it using pixels
9. Add a background image to some other element. Set it so that it does not repeat at all. Position it using %.
10. Create a style for the body element.

Upload HWK3 folder to the server, and turn in the url of HWK3 via sakai.
