

CISC103 Homework 2:

Due Sunday at Midnight

Create a folder called HWK2. Go into that folder and do all of the following :

HTML Web Page:

1. From the template you created last week, create a second web page. Save it with a name other than template.html (hwk2.html works).
2. Include a title, at least 2 different headers, and a paragraph.
3. Below that, include an unordered list
4. Include an ordered list as one of the list items in an ordered list.

Note: the default for tables is to have no border. But if we want to see the edges of the cells in a table, the best way to do it is to use CSS to specify that we want a border. Of course, we haven't learned CSS yet. So for now, at the top of your web page (right below the title but above the </head> tag) paste the following css:

```
<style>
  table {      border-width: 1px;
               border-style: solid;
               }
  td { border-width: 1px;
        border-style: solid;
        }
</style>
```

5. Include a table with headers at the top of each column
6. Create a table that holds the following questions in the left column, and answers those questions in the right column:

Table Questions

1. If the first row of a table has 3 data cells, how many data cells must be in each other row?	answer here
2. What is the easiest way to place a table inside of a table?	answer goes here
3. If we specify that colspan = '2', does that span two data cells across, or two data cells down?	answer goes here
4. Can I place data in between two tr tags, without having td tags?	answer goes here

7. Include a table that looks like the table below (using tables within tables: in the bottom row each data cell holds a tables)

table of junk food	table of cookies							
<table border="1"> <tr> <td>potato chips</td> <td>fritos</td> <td>pretzels</td> </tr> </table>	potato chips	fritos	pretzels	<table border="1"> <tr> <td>oreos</td> <td>chocolate chip</td> </tr> <tr> <td>mint milano</td> <td>vanilla wafers</td> </tr> </table>	oreos	chocolate chip	mint milano	vanilla wafers
potato chips	fritos	pretzels						
oreos	chocolate chip							
mint milano	vanilla wafers							

8. Create a table that looks like this (using colspan and rowspan) – this is one table only:

	orange	purple
blue	green	
	black	white

9. Make sure the second html page validates!!! Use validator.w3c.org to upload the hwk2.html page, and make sure you get the green Congratulations bar.

Turn in the template html page and the second html page as well via sakai
