

Technology Start-ups Lecture 1

John Cavazos

Dept of Computer & Information Sciences

University of Delaware

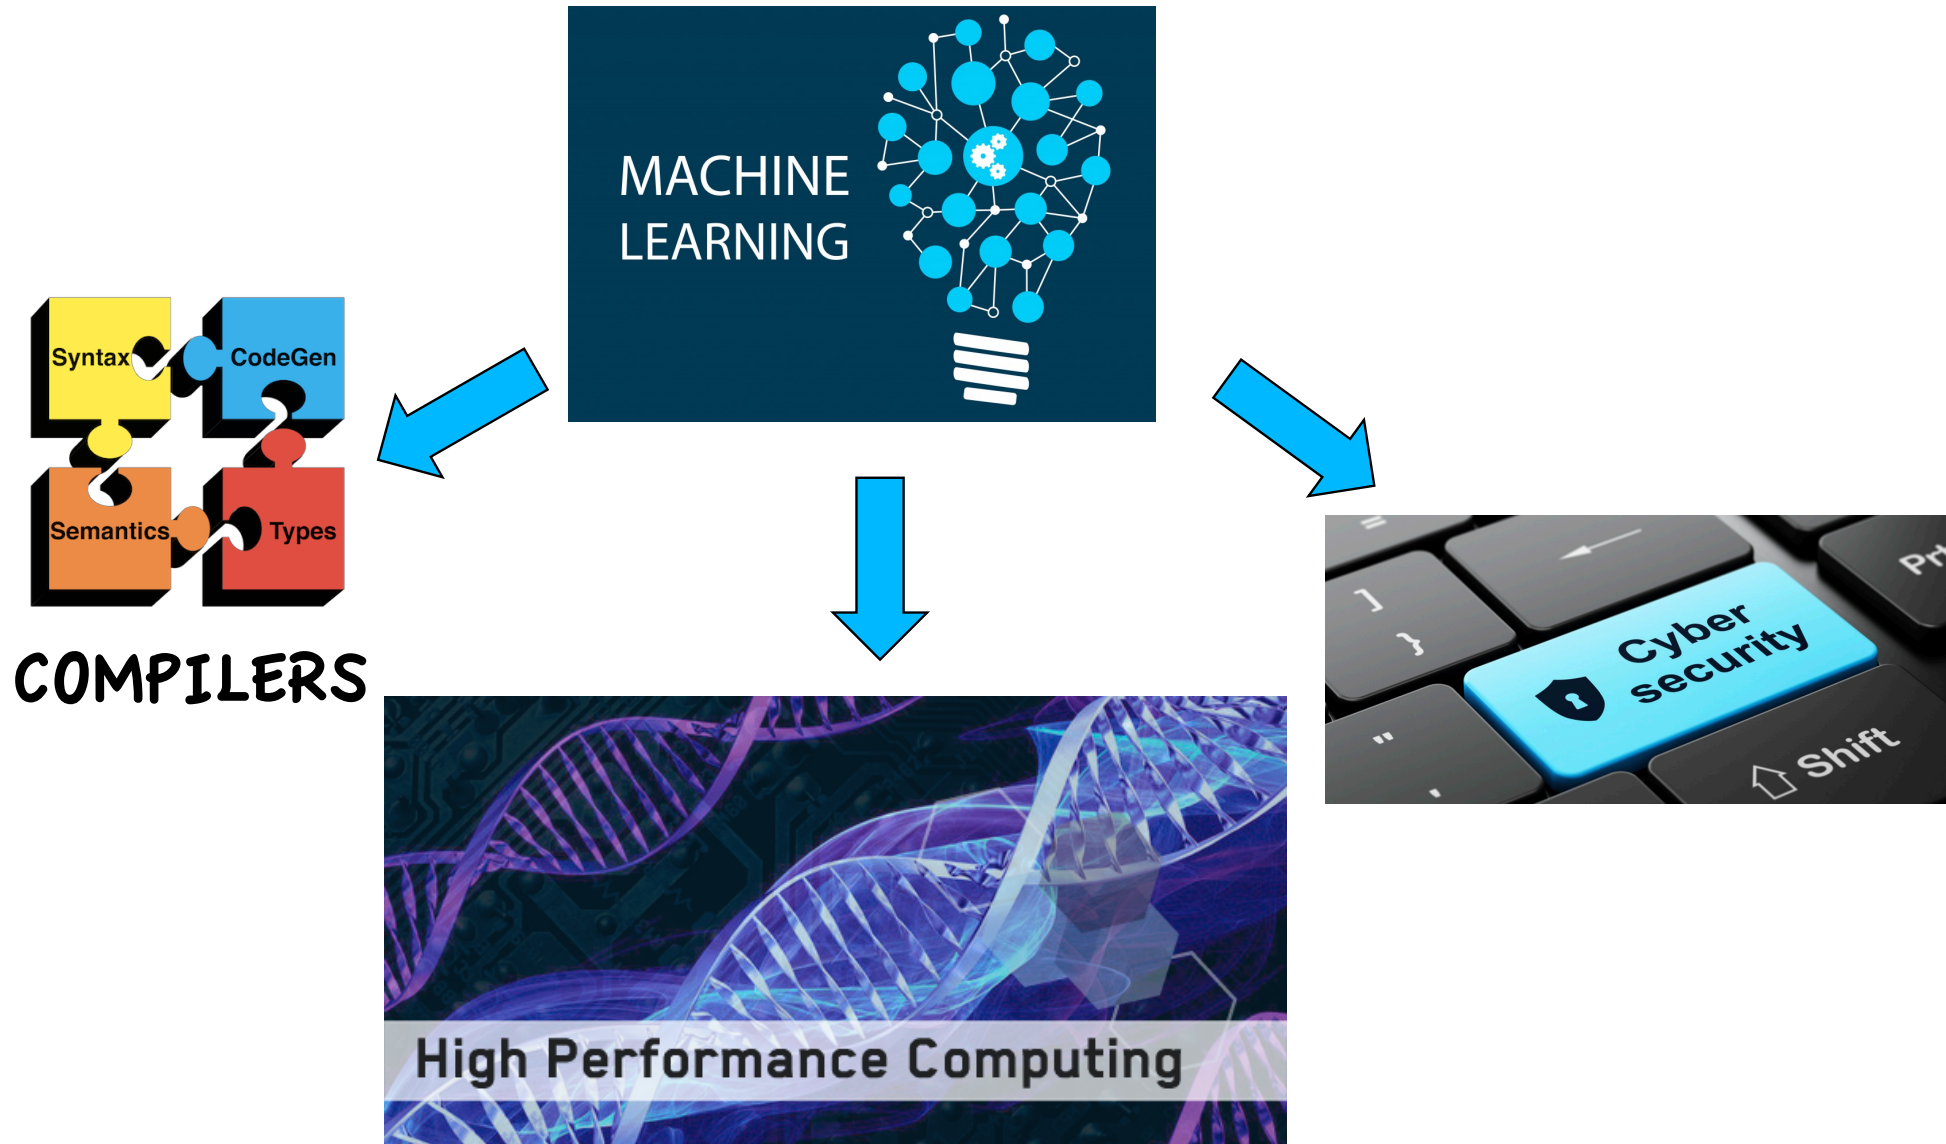

Bio of Instructor

- John Cavazos <cavazos@cis.udel.edu>
- Associate Professor, CIS
- Previously: JP Morgan Faculty Fellow, Institute for Financial Services Analytics
- Startup Experience
 - Founder and CEO, Cyber 20/20 Inc.
 - Mach37 Accelerator program
 - NSF I-Corps program

My Research

Why Take This Class? (1/2)

- Interested in starting or working at a startup?
 - 9/10 startups fail!
 - Derisk your product

Why Take This Class? (2/2)

- Interested in succeeding in an established company?
 - Many new products and/or development efforts fail!
 - Derisk your ideas

Lecture 1: Overview

- **Structure of Course**
- Administrivia
- Running Lean (Chapter 1)
- Let's Get into Groups

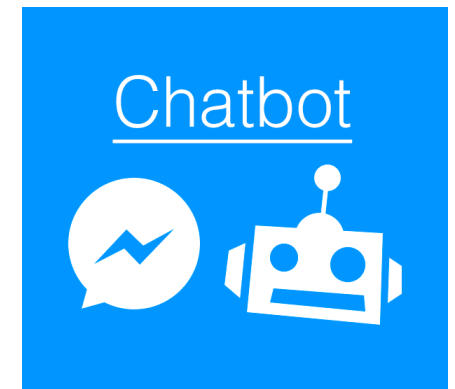

Project: Build A Start-up

1. Concept/Idea

COMPILERS

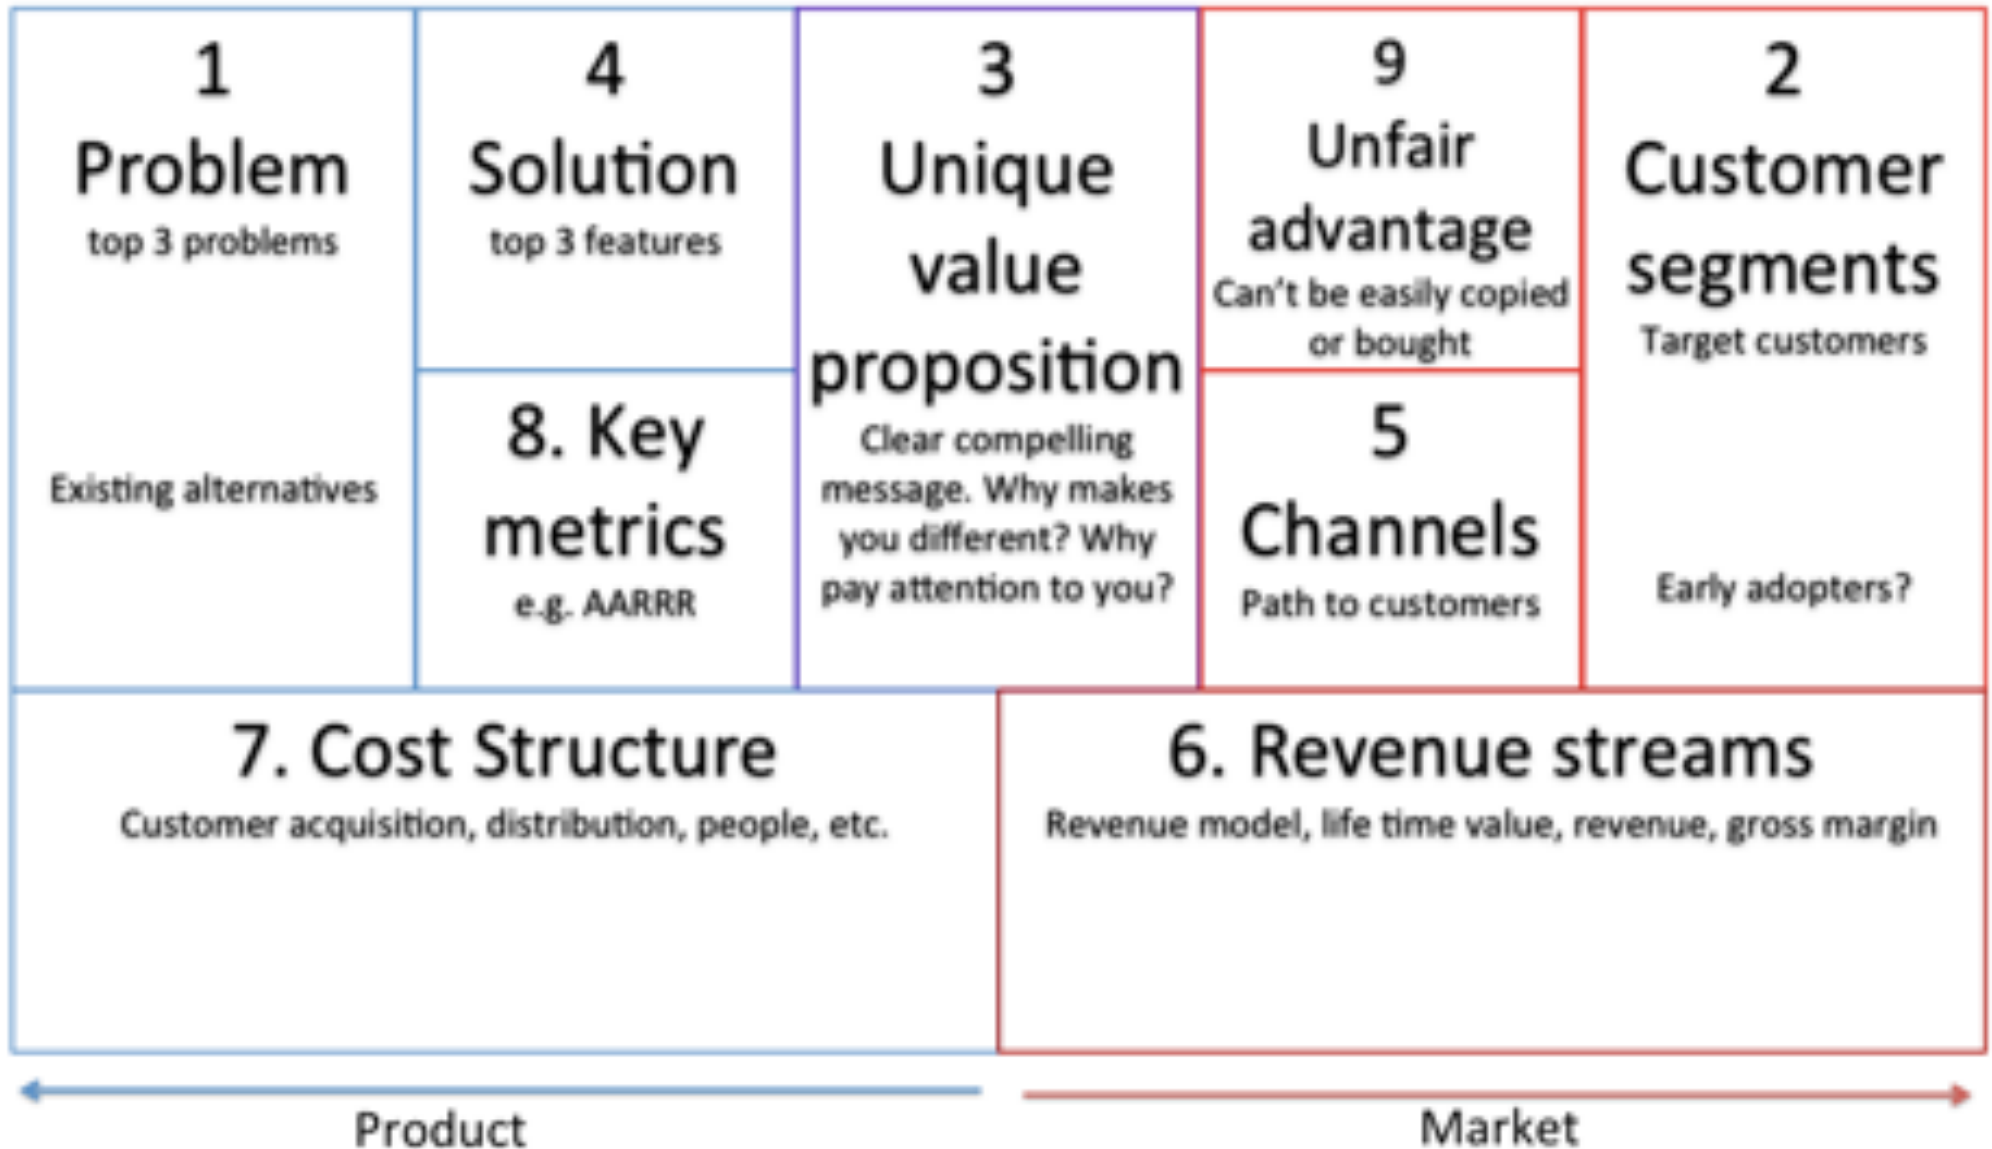

Project: Build A Start-up

2. Build-Measure-Learn Loop

Lean Canvas

Structure of the Course

- Lectures by myself on lean startup
- Guest lectures on other important aspects
- Starting in couple weeks
 - Student presentations
 - Present research paper on related tech
 - Profile one technology startup
 - Project status updates

Project Status Updates?

- Students create a startup
 - Small groups of students per startup
 - Project status
 - Present evolving lean canvas
 - Discuss status on tech development
 - Discuss customer discovery interviews
 - Project reports
 - Due midterm and end of semester
 - Work proportional to size of team

Project 1: Design

- Choose a topic of interest (from list instructor specifies)
- Ideation and design
 - Extensive wire frame design
 - Website
- Project Report
 - ~2 pages per team member
 - Template available online (font size, margins, etc.)
- Project hand out available soon

Project 2: Implementation

- Extension of Project 1 (recommended)
- Extensive programming and/or analysis
- Deliverable: Report (~2 pgs per team member)
 - Conference paper format
 - Project presentation (~10 mins)
- Project handout available in a couple weeks

Basis for Grading

- Your individual paper presentations (20%)
- Class Quizzes (5%)
- Team Projects (75%)
 - Project 1 (30%)
 - Presentations and Project Report
 - Project 2 (45%)
 - Presentations and Project report

No Midterm or Final!

Lecture 1: Overview

- Structure of Course
- **Administrivia**
- Running Lean (Chapter 1)
- Let's Get into Groups

Background/References

- Should be familiar with a programming language
- Textbook

Project Guidelines

- Reports should be
 - Well-written and formatted correctly
 - Properly referenced
 - Results should be presented with graphs
 - Intellectual merit most important factor
- Negative result is fine
 - However, must demonstrate something interesting

Expectations

- Class participation
- Ask questions
- Challenge all speakers.
- NOT a lecture class or a passive experience.
ACTIVE learning.
- Most common project problem: Not getting started
- *Ask for help if you need it!*
 - I will hold office hours Saxby's on Amstel Ave.
 - Email *first* me whenever you want an appointment.
 - Require checkpoints to show me status!

Lecture 1: Overview

- Structure of Course
- Administrivia
- **Running Lean (Chapter 1)**
- Let's Get into Groups

Why do startups fail?

Because they build the wrong product!

Why do startups build the wrong product?

- You fall in love with your solution

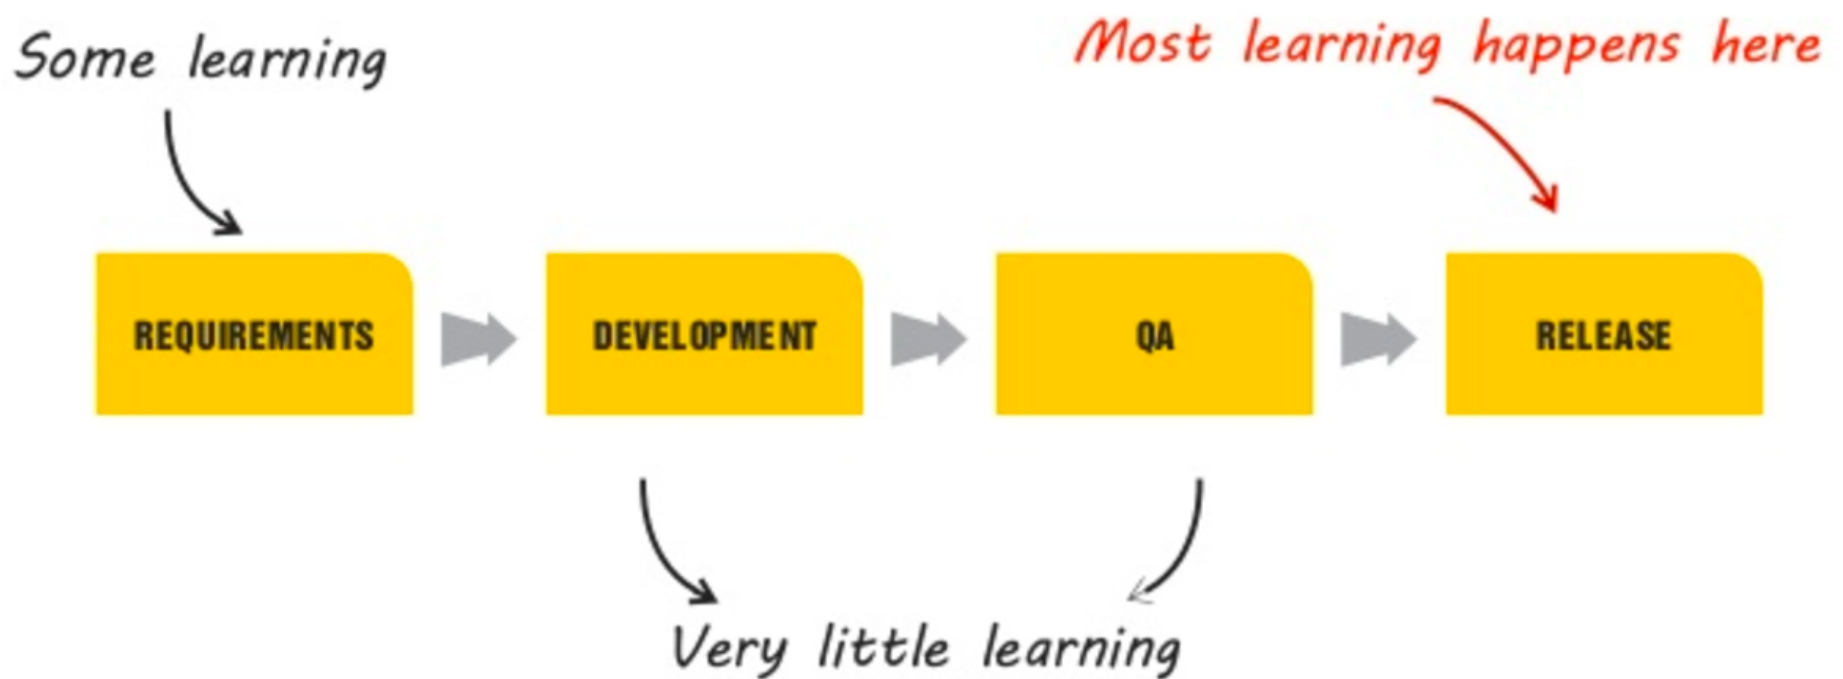

*We built it and we didn't expect it to be a company, we were just building this because we thought it was **awesome**.*

- Mark Zuckerberg

Why do startups build the wrong product?

- Product development gets in the way

Why do startups build the wrong product?

- Startups don't listen to customers

*If I had asked people what they **wanted**, they would have said **faster horses**.*

-Henry Ford

*It is not your customer's job to know what they **want**.*

-Steve Jobs

How do startups build the right product?

Chapter 1: Meta-Principles

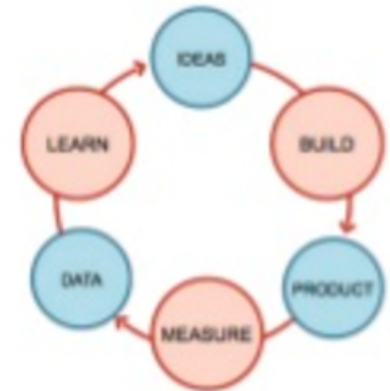

Use the Lean Startup methodology!

Document your Plan A

Identify the riskiest parts of your plan

Systematically test your plan

Chapter 1: Meta-Principles

Business model vs Business plan

PROBLEM <small>Let your idea fit customer needs.</small>	SOLUTION <small>Define a possible solution to each problem.</small>	UNIQUE VALUE PROPOSITION <small>Single, clear, compelling message that states why you are different and better than the competition.</small>	UNFAIR ADVANTAGE <small>Something that cannot easily be bought or copied.</small>	CUSTOMER SEGMENTS <small>Let your target customers pay more.</small>
EXISTING ALTERNATIVES <small>Let your idea address an unmet need.</small>	KEY METRICS <small>Let the key numbers that tell you how your business is doing.</small>	HIGH-LEVEL CONCEPT <small>Let your work be customer centered and customer focused.</small>	CHANNELS <small>Let your work be customer centered and customer focused.</small>	EARLY ADOPTERS <small>Let the characteristics of your ideal customers.</small>
COST STRUCTURE <small>Let your fixed and variable costs.</small>	REVENUE STREAMS <small>Let your sources of revenue.</small>			

Business Model

- A single diagram
- 15 minutes to develop first draft
- Iterate until product/market fit achieved
 - Learning by “Getting out of the building”

Lean Canvas

Business Plan

- A long document
- Often takes weeks to months to complete
- Little to no customer interaction
 - “Stay in the building”

Chapter 1: Meta-Principles

Step 1: Document your Plan A

Solution

PROBLEM <small>List your top 11 problems.</small>	SOLUTION <small>Define a concrete solution for each problem.</small>	UNIQUE VALUE PROPOSITION <small>Single, clear, compelling message that states why you are different and worth paying attention.</small>	UNFAIR ADVANTAGE <small>Something that cannot easily be bought or copied.</small>	CUSTOMER SEGMENTS <small>List your target customers and roles.</small>
EXISTING ALTERNATIVES <small>List how these problems are solved today.</small>	KEY METRICS <small>List the key numbers that tell you how your business is doing.</small>	HIGH-LEVEL CONCEPT <small>List your 1000-11,000-word idea. You can't plan for failure.</small>	CHANNELS <small>List your path to customers (direct or indirect).</small>	EMPLOYEES <small>List the characteristics of your ideal employees.</small>
COST STRUCTURE <small>List your fixed and variable costs.</small>		REVENUE STREAMS <small>List your sources of revenue.</small>		

Note: Your Plan A is often wrong!

Chapter 1: Meta-Principles

Step 2: Identify the Riskiest Parts

PROBLEM <small>List your top 11 problems.</small>	SOLUTION <small>List your possible solution for each problem.</small>	UNIQUE VALUE PROPOSITION <small>Single, clear, compelling message that states why you are different and worth paying attention.</small>	UNFAIR ADVANTAGE <small>Something that cannot easily be bought or copied.</small>	CUSTOMER SEGMENTS <small>List your target customers and users.</small>
EXISTING ALTERNATIVES <small>List how these problems are solved today.</small>	KEY METRICS <small>List the key numbers that tell you how your business is doing.</small>	HIGH-LEVEL CONCEPT <small>List your \$100M+ strategy (e.g. YouCan + iPlan for sales).</small>	CHANNELS <small>List your path to customers (direct or indirect).</small>	EARLY ADOPTERS <small>List the characteristics of your ideal customers.</small>
COST STRUCTURE <small>List your fixed and variable costs.</small>		REVENUE STREAMS <small>List your sources of revenue.</small>		

Three Stages of a Startup

Problem/Solution Fit

Stage 1: Do I have a problem worth solving?

Decide what to build in the minimum viable product (MVP).

Minimum Viable Product (MVP)

Not like this...

Instead like this!

Product/Market Fit

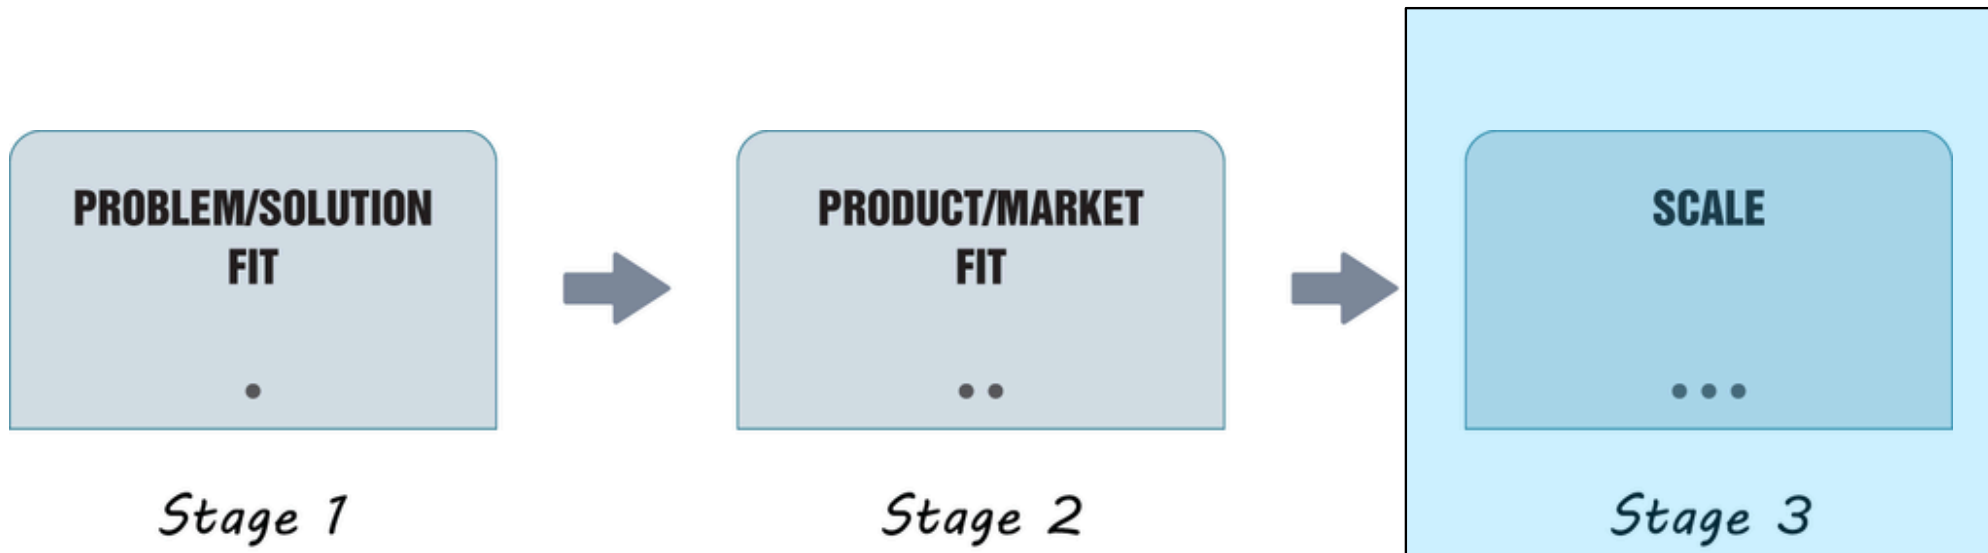

Stage 2: Have I built something people want?

Show MVP to customers.

Don't push features. Features should be pulled!

Product/Market Fit

**Stage 3: How do I accelerate growth?
Scaling your business model.**

Chapter 1: Meta-Principles

Step 3: Systematically test your Plan

Lecture 1: Overview

- Structure of Course
- Administrivia
- Running Lean (Chapter 1)
- **Let's Get into Groups**

Let's get into groups

Based on a Concept or Idea
