

Setting Up VPN Connection

We will be using **AnyConnect** software for VPN connections.

1. Install **Google Authenticator** app on a mobile device.

AnyConnect uses **2FA** but a code will not be automatically sent to you. You will need to use **Google Authenticator** to generate a code. Download and install the **Google Authenticator** app from either the **Google Play** (Android) or **App Store** (Apple iOS devices) on your mobile device and follow these [instructions](#).

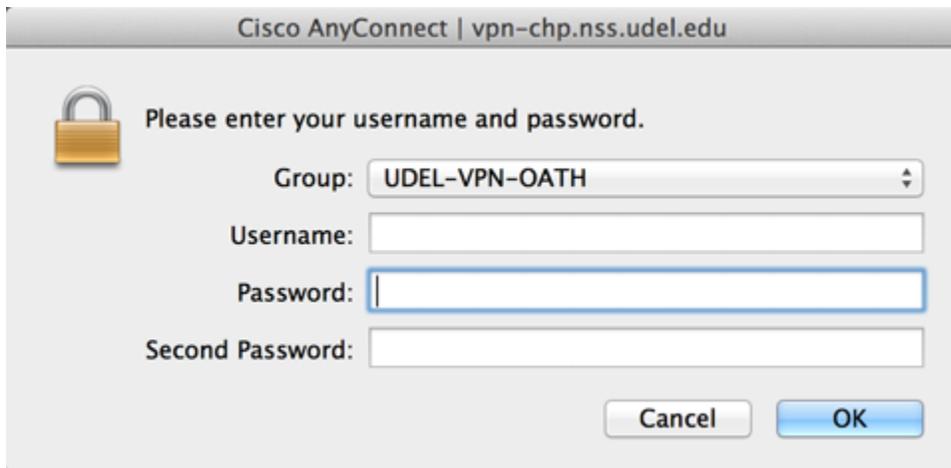

2. Install **AnyConnect** software from UDeploy on your laptop or desktop.

From UDeploy - select the the [AnyConnect](#) software for your system. **NOTE: If you are a Windows user, you MUST install this software using 'Run As Administrator'**. To do this right click on the downloaded file and choose this option.

3. Test your AnyConnect connection.

Find the AnyConnect app and open it. The icon should look like this: 

You should see a dialog box similar to this:

- - **Username:** Enter your udel email name (with or without @[udel.edu](#)) **NOTE: Do not use your numeric id.**
 - **Password:** Enter your udel password
 - **Second Password:** 6 digit code from Google Authenticator - open your Google Authenticator app on your mobile device and enter the most recent code

Click Ok - you should see a message that you are connected.
