

Photoshop Lab 3

The absolute best way to really learn and feel comfortable with Photoshop is to start playing with it. For this lab you will be creating your own image. Think about creating an image to be used on your web site. Be as creative as you like. The image must be at least 400x400 in size, although it can be larger (note that it is most definitely easier to make an image large, and then resize it to be smaller, than it is make a too-small image larger. Quality suffers when we take a small image and make it larger).

While you have a great deal of freedom with what you create, you must use the following in the creation of your image:

1. Gradient tool
2. drop shadow
3. at least 3 images on different layers
4. an opacity change on at least 1 layer
5. text
6. a color adjustment
7. at least 3 filters

Be creative and have fun.

Note that you will be graded on creativity and effort!

To turn in:

The psd version and a .jpg version of your final image.
